

# Index to Volume 45

The index to Volume 45 is composed of three parts: a subject index, an author index, and an advertising index.

The subject index is made up mainly of terms constructed by *International Pharmaceutical Abstracts*. The IPA index is an alphabetical, open-ended, controlled-vocabulary index that makes use of standardized headings. (The primary index terms for each article are listed routinely in *AJHP* as "index terms" after abstracts.) IPA covers all authored papers and editorials in *AJHP*, as well as selected letters and news reports. Items that were published in the ASHP Reports section, including official ASHP statements and guidelines, are indexed under "American

Society of Hospital Pharmacists." The subject index also notes all regular *AJHP* columns and, under the respective column headings, the titles of items in the "Questions and Answers," "Management Consultation," "Student and Resident Forum," "Joint Commission Dialogue," "Letters," "Editorials," "Book Reviews," and "Software Reviews" sections; the individual reports from affiliated chapters in "ASHP Affiliates"; and the titles of individual stories in "News." The subject index also contains, under the heading "Correction Notices," the title and issue of publication of items for which corrections were printed, as well as the page numbers on which the corrections appear.
